

# ARIZONA<sup>®</sup> LEATHER INTERIORS CARE GUIDE

## CONGRATULATIONS!

Arizona Leather seating is handcrafted in America and superior in every way. We are confident you will enjoy your furniture for years to come.

## PRIOR TO THE ARRIVAL OF YOUR NEW FURNITURE

If your furniture will be resting on a hard surface (i.e., tile or wood), furniture coasters are recommended. This is to protect your floor. We suggest you use rubber-bottomed coasters that can be purchased at any local hardware store. When your furniture arrives, our delivery personnel will gladly place it on the coasters you have provided.

## WHEN YOUR NEW FURNITURE ARRIVES

### PLEASE NOTE:

The seats, backs and arms will look full and puffy. This is normal and to be expected with new leather furniture.

Simply start sitting on your furniture. With time and use, the seat cushions will become soft and comfortable, like those on the store model. Slight differences in firmness between seat cushions will gradually disappear over time.

To break in your sofa quickly, remove the seat cushions. Then put the seat cushions on a clean rug, leather side down, and walk on them for a few minutes in your stocking feet.

## NATURAL MARKINGS: UNIQUE TO GENUINE LEATHER

As a natural product, each hide bears the unique traces of its own history. No two hides are exactly alike. The fascinating variety of markings includes: healed scars, barbed wire marks, stretch marks, abrasions, wrinkles, insect bites, pore patterns (grain) and brands.

Every effort is taken to ensure that the leather on your sofa has been cut and fitted to look its very best. Great care is taken to use the cleanest sections (known as the "first cut") on the most visible areas of your sofa: the pillows, seat cushions and arms.

Natural markings will be present in your furniture. They are the hallmarks of a quality leather product. Below are only a few examples of possible marking you may see.

## CARE & CLEANING

To preserve the luxurious appearance of your Arizona Leather furniture, please note these general tips:

- Take care not to mar the leather with sharp objects, including jewelry.
- Avoid long periods of exposure to sunlight or direct heat (including radiators, heating vents, windows, skylights and powerful lamps).
- Do not sit on the back or arms of your furniture. This can cause unwanted wear.
- Avoid pulling or sitting on back pillows. This can cause damage to seams and zippers.
- Use only Arizona Leather care products.
- Do not use Armor All®, saddle soaps, ammonia based solutions, Windex®, etc.

## RECOMMENDED CLEANING & CONDITIONING SCHEDULE:

### WHEN YOUR NEW FURNITURE ARRIVES:

To assure longevity, we recommend applying Arizona Leather Protection.

### ONCE A MONTH (OR AS NEEDED):

Remove surface soil with a clean, damp cloth.

### AT LEAST TWICE A YEAR:

Fully clean, condition and protect your fine leather seating with Arizona Leather cleaning and conditioning products.

More frequent care may be necessary in dry climates, when seating is located near a heat source or when seating receives heavy use.

## CUSHIONS & PILLOWS

### SEAT CUSHIONS

Our seat cushions are designed for superior comfort and support. Arizona Leather Company uses high-density polyurethane seat cores. A high-resiliency foam layer is laminated on top of the seat core, for exceptional comfort and a "crowning" effect. A wrap of hypo-allergic, mildew-resistant Dacron® adds the finishing touch.

### SEAT CUSHION CARE

**IMPORTANT:** To ensure even wear, maximum comfort and cushion life, rotate the seat cushions once a week for the first month, then rotate as needed. Rotating is especially important if you frequently sit in the same spot. Softening and/or flattening of seat cushions is to be expected and is not warrantied.

Rotating cushions is simple and easy. To remove seat cushions loosen the Velcro fasteners by running your hand between the cushion and the sofa, while lifting gently.

(Most seat cushions on our reclining furniture are not removable.)

### ARM & BACK PILLOW CARE

All sofa pillows will flatten or compact with use. The Dacron filling is designed to last a lifetime, but must be re-lofted to maintain its shape. To "re-loft" them, hold each pillow firmly on either side with both hands and work your fingers to pull apart the fiberfill inside. There is no need to remove the cover!

**NOTE:** We recommend not adding more fiberfill. Adding more fill only makes the pillow hard and lumpy, changing the way your furniture sits.

### DOWN PILLOW CARE

Down pillows are designed to have a relaxed look. To maintain their luxurious softness, just fluff them as you would a bed pillow. We recommend fluffing each time you use your furniture, or as needed.

### ZIPPER REPAIR

If the teeth become separated, just move the zipper along its full length in both directions. This will "heal" the zipper.

### SECTIONAL LOCKS

Most sectional components come equipped with hooks to keep them attached to each other, and require two people to engage them. Position yourself in front and have another person behind the sectional where pieces connect. Together lift both pieces approximately 6"-10", align, lower the receiving piece onto the sectional hooks and set joined furniture piece on floor. To disengage, lift the "receiver" piece and guide away from the sectional hooks.
